

LIGHT CUBE

Max Kistner's durable, modular Lux-us light cubes are lit with a circular fluorescent bulb and can be used indoors or out

Lux-us light cubes are highly versatile, durable illuminated cubes with a hollow interior. They can be used as a lighted planter, toy box, corner table, magazine holder, wine/beer cooler or storage system. Two sides of the cube are convex and two concave, allowing two or more cubes to be stacked and used as book or display cases. Putting the cube on its concave side creates a comfortable, lit stool with storage area below; it comes with an optional cushion. A 12-year long-life cirouloux energy saver globe is provided to lower maintenance costs and a specially designed colour film is provided to change the cube's colour to co-ordinate with parties or events. These boxes, which are made from polyethylene, won an award for lighting energy efficiency.
